## The Paperfuge: Quiz

---

- 1) What are the three main considerations when designing a product or process?

.....

.....

.....

- 2) Identify two examples for the use of centrifuges.

- ☐ Removing solids from liquids
- ☐ Separating solids based on size
- ☐ Analysing the contents of a sample
- ☐ High-G training

- 3) True or false. Stokes' law can be used to help determine whether a separation requires a centrifuge.

- ☐ True
- ☐ False

4) How can a centrifuge be used in the diagnosis of disease?

- ☐ Analyse a blood sample
- ☐ Separate diseased cells from healthy cells
- ☐ Measure the amount of cells in a sample

5) What causes the separation of a mixture or suspension in a centrifuge?

- ☐ Density
- ☐ Mass
- ☐ Volume

6) What are the benefits of continuous operation in a chemical manufacturing process?

- ☐ Cheaper
- ☐ Reduced waste
- ☐ More flexible

7) True or false. A centrifuge is used where the particles are dense enough to separate out under gravity.

- ☐ True
- ☐ False
